NEW ZEALAND'S SUPERIOR ROAD CONE

900mm PVC SLIMLINE CONE

"Not all cones perform equally – so discover the many benefits of the top-selling Proline PVC road cone"

The Proline PVC Cone not only lasts longer, it is stronger and safer due to the many new features highlighted below. Fully complies with NZ's tough Code of Practice standards.

PVC INJECTION MOULDED PROCESS

Provides an extremely robust product designed to withstand the harsh environment that cones are exposed to in NZ on a daily basis.

SLIMLINE PROFILE AND HEAVY DUTY BASE

Provides a lower centre of gravity making it the most stable cone in windy and truck wind blast conditions. The profile of the cone taper matches most other slimline cones allowing for mixed stacking situations.

PERMANENT ANTI-THEFT BRANDING

An option whereby your logo is moulded into the base of the cone thus minimising the chances of theft due to the permanent identification.

SINGLE FLUORESCENT COLOUR

Consistent colour throughout the entire cone body meaning that if damaged or scuffed the exposed surface of the cone remains unchanged. No issues with non-compliance.

FLEXIBLE BASE

Provides greater stability over varying terrain conditions.

ANTI-JAM NODULES

Moulded throughout the inside of the cone. Prevents jamming of cones stacked together.

WEIGHT OPTIONS

(4.5 or 6.3kg*). Different options depending on your application. For example the lower weight 4.5kg cone for standard situations or the 6.3kg cone for high wind buffering or critical conditions thus avoiding the need for expensive doubling up (i.e. cone tapers or long term sites).

*Weights are approximate with a small manufacturing tolerance.

The Proline PVC cone is quite simply the best cone available on the market today. It utilises the best technology and design to produce the highest quality and most practical road cone for our customers use.
